ANNOUNCEMENT

INNER BRACED Furniture has had meagre advertising publicity, except through its sales. Having “made good” as the best constructed furniture in America, its demand soon exceeded the factory capacity at Schoolcraft, Michigan. But large facilities have been provided for its present and future manufacturing needs at this point.

The *INNER BRACED* standard of selected wood, slowly kiln dried, accurately machined, assembled and hand completed, with best finishes, will be maintained. As our patented invisible steel bracing and joints make every *INNER BRACED* piece practically indestructible, we shall continue to give the purchaser the highest known furniture values.

THE INNER BRACED FURNITURE CO.

ELKHART, INDIANA

INNER BRACED FACTS

INNER BRACED furniture is made better and stronger than necessary and carries a *TEN* year guarantee as an earnest of that permanency. Retaining all the unsurpassed beauty of selected wood, its hidden steel strength like the skyscraper's, makes it the strongest wooden furniture known. Its joints never loosen, hence the bother and expense of repair, as in "glue-joint" furniture, is eliminated. The unequalled merit of *INNER BRACED* furniture has quickly appealed to Hotels, Clubs, Colleges, Y. M. C. A.'s, the U. S. Government, and the discriminating public generally. While such goods carry with them a silent challenge to all other makes and need no further testimony, yet we willingly refer the stranger to all users of this product, as well as to any furniture expert or unbiased dealer.

Looking through the wood to show continuous steel reinforcement.

Light appearing lines show steel in place in stretchers and seat rails.

In short, we claim that *INNER BRACED* furniture combines superior stock, workmanship and finish, with steel strength, at no greater cost than for the best manufactures of mere "glue-joint" furniture; that it is the most scientifically made; has no near equal for style, strength and durability; and is a permanent asset, not an increasing liability and expense.

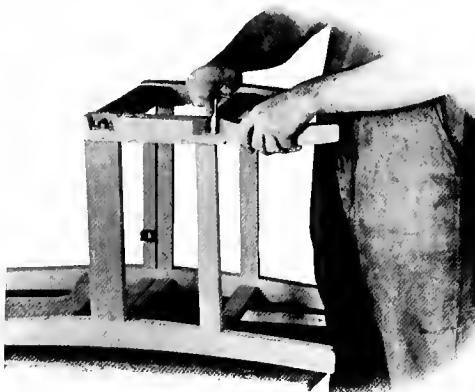

INNER BRACED DETAILS

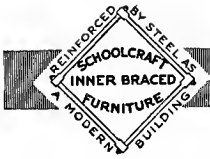

Spiral Dowel and Steel Construction.

In light weight frame or box construction, $\frac{5}{32}$ inch Bessemer steel rod and $\frac{1}{2}$ inch drilled steel joints are invisibly placed in stretchers and rails, but heavier frames have larger sized steel. The steel joint has a side hole so taper threaded as to lock one rod and allow the other rod to pass through it lengthwise. This joint is driven into the same sized hole in the wood stock. A spiral dowel is placed above and below the steel rod, where possible, to insure the greatest rigidity of construction.

When the piece of furniture is assembled an even tension is given the steel device at the corner posts by tightening the nuts, and the $\frac{1}{2}$ inch wood openings are plugged. The covered "hollows" of mortise and tenon construction are never present in *INNER BRACED* furniture because the wood removed from the stock is replaced by dowels or steel.

Wood removed to show method of tightening steel.

CUT through the completed frame and the installed steel will open about one eighth of an inch, clearly showing the extra steel restraining force which must be overcome, before any strain on the wood joint is possible. In fact, *THE STRAIN IS ON THE STEEL*, not the wood.

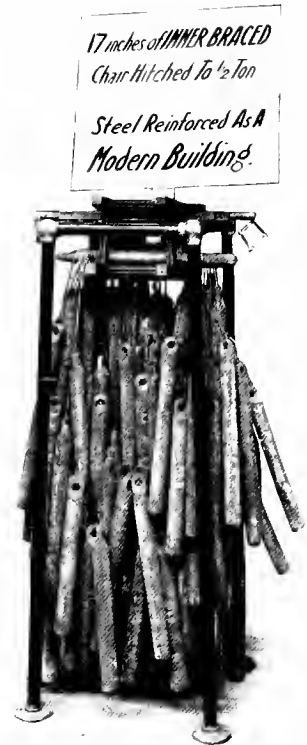

Furniture, thus built, has astounding permanent strength. An *INNER BRACED* piece easily withstands enough weight to snap the steel without a wood joint opening.

But *INNER BRACED* furniture has other superior points of construction. All oak stock is Quartered White, not red or mixed, hence costs more. As red oak weighs 41 lbs. a cubic foot, and white, 46 lbs., *INNER BRACED* furniture has superior weight and is stable.

Box construction is employed and arms are fastened to the box seat rail, not to the seat. The seat is fortified by tongue and groove joints.

INNER BRACED finishes are the best and have met hearty approval. All upholstery has genuine leather and hair.

Rotary chairs have a simple, strong mechanism which cannot get out of order, and is easily adjustable.

THIS furniture is equipped with Domes of Silence, or castors, so as to be moved easily and protect its legs and the floor, as well. Goods are carefully inspected, then particular attention is given the wrapping with excelsior pads and securely crating, hence the transportation company is responsible for any damage to them. In case of damage have the Railway Agent make notation of same on the Bill of Lading before accepting the goods, or afterwards, if there is concealed damage; then notify us.

INNER BRACED furniture is marked "U. S. Patented" and has the following unequalled guarantee, or **TEN** years free insurance, plainly stamped thereon.

"THIS FURNITURE HAS OUR PATENTED, INVISIBLE, CONTINUOUS STEEL BRACING. WE AGREE TO REPLACE SAID FURNITURE, FREE OF CHARGE, SHOULD ANY STRETCHER OR BOX RAIL BECOME LOOSE FROM USE WITHIN TEN YEARS OF THE PURCHASE DATE."

Continuous, invisible steel bracing is protected by U. S. Letters Patent No. 991,648, May 9th, 1911, and No. 1,017,712, February 20th, 1912, and can be used in the United States only by this company.
